

HL Co-rotation Parallel Twin-screw Pelletizing Machine From http://

Scope of this equipment been applied: all kind of character changing pelletizing, cable pelletizing, wood plastic pelletizing and so on.

Building block screw and barrel: screw thread block and barrel block can be chosen by different material, characteristic of barrel building block make the processing and assembling convenient and precise, special surface treatment of wear-resistant and anti-erosion can be used to process all kinds of material.

Reduction and distribution system: high torque design, high precision gear, good lubrication system and protection device can guarantee highest bearing ability.

PLC controlling system: precise separate unit controlling, humanized PLC controlling panel, more digital program storage and it can be connected to internet.
